

計算 4

$A = 3x + 1, B = 2x - 4$ のとき、次の計算をなさい。

(1) $A + B$

$$3x + 1 + 2x - 4 \qquad 5x - 3$$

(2) $A - B$

$$3x + 1 - 2x + 4 \qquad x + 5$$

(3) $A + 4B$

$$3x + 1 + 8x - 16 \qquad 11x - 15$$

(4) $5A - 3B$

$$15x + 5 - 6x + 12 \qquad \underline{9x + 17}$$

(5) $\frac{A}{3} + \frac{B}{4}$

$$\frac{3x+1}{3} + \frac{2x-4}{4} \qquad \underline{\frac{9x-4}{6}}$$

$\frac{12x+4+6x-12}{12}$

(6) $\frac{A}{2} - \frac{B}{3}$

$$\frac{3x+1}{2} - \frac{2x-4}{3} \qquad \underline{\frac{5x+11}{6}}$$

$\frac{9x+3-4x+8}{6}$
